PROFESSIONAL SUMMARY

Results-driven Business Analyst with 5+ years of experience leading end-to-end systems implementations, eliciting and documenting requirements, and delivering data-driven solutions that improve operational performance. Proven ability to bridge the gap between business stakeholders and technical teams, from facilitating discovery workshops and authoring user stories through to UAT execution, vendor management, and post-implementation support. Skilled in SQL, Python, Power BI, and Salesforce, with a strong track record of translating complex business needs into scalable systems and reporting solutions across NDIS, finance, and operations.

WORK EXPERIENCE

Business Systems Manager | [Maple Community Services](#)

Mar 2020 - Jun 2025

- Led end-to-end implementation of a customised Salesforce CRM solution, acting as the primary liaison between internal stakeholders, Salesforce implementation partners, and integration vendors including Xero, Skedulo, and Lumary.
- Facilitated discovery workshops with executives, operational teams, and frontline staff to capture business workflows, pain points, and system requirements, translated findings into structured requirements documentation and user stories.
- Coordinated integrations across Salesforce, Lumary, Skedulo, and Xero to unify client, workforce, and financial data across the organisation, improving data visibility across services supporting 500+ clients nationally.
- Designed and executed User Acceptance Testing (UAT) including test planning, test case development, defect tracking, and formal business sign-off processes.
- Developed implementation roadmaps, go-live procedures, and post-deployment support frameworks to ensure smooth system transitions and sustained adoption.
- Delivered system training and support documentation to 300+ staff across the organisation, supporting adoption of new platforms and driving self-service capability.
- Acted as primary liaison between executives, internal users, and external software vendors throughout the full project lifecycle from requirements through to post-implementation review.
- Designed workflow automations that reduced manual processing and improved cross-department efficiency across Finance, HR, Operations, and Compliance.

Data Analyst | [Maple Community Services](#)

Mar 2020 - Jun 2025

- Engaged directly with the CEO, Directors, and operational teams to define KPIs and translate strategic objectives into structured, measurable reporting metrics across Finance, HR, Operations, IT, and Compliance.
- Built and deployed Power BI dashboards consolidating data from 5 enterprise systems into a single source of truth, used daily by 50+ staff for operational decision-making.
- Conducted business process analysis to identify reporting gaps and data flow inefficiencies; documented current-state and future-state processes to support integration design and stakeholder alignment.
- Developed Python automation scripts to validate and reconcile billing, payroll, and NDIS claim data prior to submission, reducing invoice errors by ~30% and saving 10+ hours of manual effort per week.
- Produced audience-appropriate reporting outputs for executive, operational, and compliance stakeholders, translating complex data into actionable insights that informed workforce reallocation and service delivery decisions.

Finance Officer | [Maple Community Services](#)

Sep 2019 - Mar 2020

- Analysed payroll, invoicing, and NDIS funding data to ensure accuracy, compliance, and timely reconciliation.

- Investigated and resolved data discrepancies through structured analysis, improving reporting accuracy during a period of rapid organisational growth.
- Contributed to building foundational reporting processes that were later scaled and automated in the Business Analyst role.

KEY PROJECTS

Fuel Check Price Analysis: SQL + Power BI

Independent analytics project analysing 1.85 million NSW/ACT fuel price records across 25 months, demonstrating end-to-end analytical and reporting capability.

- Scoped and structured the analytical approach from scratch: defined the problem, identified data quality issues, designed a normalisation methodology, and delivered findings in an interactive Power BI dashboard.
- Identified that the dataset recorded periodic polling snapshots rather than genuine price changes; documented the finding, assessed its business impact on aggregations, and redesigned the data pipeline to correct for the bias.
- Produced stakeholder-ready insights: Coles Express charges ~8 cents above the NSW market average for U91; the P98 premium over U91 has widened from ~23 to ~24.7 cents over the dataset period; South Grafton has the cheapest station at 139.45 cents/L.
- Delivered a four-page interactive Power BI dashboard covering trend, brand, and geographic analysis across 2,800+ stations and 1,100+ suburbs.

Salesforce CRM Implementation: Maple Community Services

2020 - 2022

End-to-end CRM implementation project integrating Salesforce with Xero, Skedulo, and Lumary across a national NDIS provider supporting 500+ clients.

- Facilitated requirements discovery workshops with executives, operational managers, and frontline staff; produced structured requirements documentation, process maps, and user stories for the implementation partner.
- Coordinated system integrations across four enterprise platforms to centralise client, workforce, and financial data, eliminating data silos and improving cross-department visibility.
- Designed and executed UAT across all integrated modules; managed defect tracking, resolution, and formal sign-off prior to go-live.
- Developed go-live procedures, rollback plans, and post-deployment support frameworks; delivered training to 300+ staff and produced adoption documentation across the organisation.

EDUCATION

Bachelor of Engineering (Honours) – Software Engineering

2025

University of Technology Sydney (UTS)

Relevant coursework: Business Requirements Modelling, Information System Development Methodologies, Systems Analysis and Design, Engineering Project Management, Database Fundamentals, Introduction to Data Analytics

SKILLS & TECHNICAL PROFICIENCIES

Business Analysis: Requirements elicitation and documentation, business process mapping, current-state and future-state analysis, user stories, gap analysis, UAT (test planning, defect tracking, sign-off), stakeholder engagement, vendor management

Systems & Platforms: Salesforce (CRM implementation, configuration), Xero, Lumary, Skedulo, PRODA, SQL Server, Power Automate, Jira, Confluence, Git, GitHub

Data & Reporting: SQL (CTEs, joins, subqueries, aggregations), Python (pandas, automation), Power BI (DAX, data modelling, dashboards), Excel (Advanced: PivotTables, Power Query)

Analytics Techniques: EDA, KPI development and metric definition, trend analysis, variance analysis, root cause analysis, performance monitoring, data validation

Soft Skills: Stakeholder communication, executive reporting, cross-functional collaboration, training delivery, workshop facilitation, translating technical findings for non-technical audiences
