

BILAL ALI

Data Analyst | BI Analyst

Sydney, Australia • 0450 369 307 • bilal.ali2571@gmail.com • [linkedin.com/in/bilalali-01](https://www.linkedin.com/in/bilalali-01) • Australian Citizen

PROFESSIONAL SUMMARY

Results-driven Data Analyst and BI Analyst with 5+ years of experience transforming complex, fragmented datasets into actionable insights that drive business decisions. Proven ability to deliver end-to-end analytics solutions: from raw data ingestion and validation through to interactive Power BI dashboards, integrating data across CRM, financial, and operational systems. Skilled in SQL, Python, Power BI, and DAX, with a strong track record of identifying data quality issues, building scalable data models, and partnering with stakeholders to define KPIs that align with strategic goals.

WORK EXPERIENCE

Data Analyst | [Maple Community Services](#)

Mar 2020 - Jun 2025

- Built and deployed Power BI dashboards used daily by 50+ staff across Finance, Operations, HR, IT, and Compliance, consolidating data from 5 enterprise systems into a single source of truth for KPI tracking and executive decision-making.
- Designed star-schema data models integrating Salesforce, Skedulo, Lumary, Xero, and PRODA, enabling accurate reporting across a workforce of ~250 support workers and ~350 NDIS participants, reducing cross-system data mismatches by ~40%.
- Developed Python automation scripts to validate and reconcile billing, payroll, and NDIS claim data prior to submission, reducing invoice errors by ~30% and improving PRODA claim accuracy to support funding compliance.
- Wrote advanced SQL queries (CTEs, window functions, joins, subqueries, aggregations) to validate and analyse operational and financial data across integrated systems, supporting month-end close and funding audits.
- Identified and resolved reporting inefficiencies causing frequent data discrepancies between finance and operations; automated manual reconciliation processes, saving 10+ hours of manual work per week.
- Partnered with the CEO and Directors to define measurable KPIs and translate strategic objectives into structured, reportable metrics across the organisation.
- Delivered actionable insights that directly informed leadership decisions, including support worker reallocation, identification of underperforming services, and early detection of funding shortfalls.
- Mapped data flows and supported integration design across CRM, workforce, and accounting platforms, improving data consistency and reducing manual data entry across teams.
- Delivered training to operational teams on dashboard interpretation and self-service reporting, increasing data literacy and reducing ad-hoc reporting requests to the analytics function.

Finance Officer | [Maple Community Services](#)

Sep 2019 - Mar 2020

- Analysed payroll, invoicing, and NDIS funding data to ensure accuracy, compliance, and timely reconciliation.
- Investigated and resolved data discrepancies using structured Excel analysis, improving reporting accuracy during a period of rapid organisational growth.
- Contributed to building foundational reporting processes that were later scaled and automated in the Data Analyst role.

KEY PROJECTS

FuelCheck Price Analysis: SQL + Power BI

End-to-end analytics project analysing 1.85 million NSW/ACT fuel price records across 25 months using Python, SQL Server, and Power BI.

- Identified that the dataset recorded periodic polling snapshots (20-40+ per day) rather than genuine price changes; built a normalisation pipeline to resolve intraday polling bias before analysis, reducing 1.75M rows to 1.25M daily observations.
- Discovered Coles Express charges ~8 cents above the NSW average for U91, while Metro Fuel and Mobil are consistently the cheapest brands; found the P98 premium over U91 has widened from ~23 to ~24.7 cents over the dataset period.
- Delivered a four page interactive Power BI dashboard (trend, brand, geographic analysis) across 2,800+ stations and 1,100+ suburbs, with DAX measures, dynamic titles, and slicers for fuel type and date range filtering.
- Documented data quality findings including 99,094 bad-date rows, brand labelling inconsistencies, and edge-case postcode verification across NSW/ACT scope.

Integrated Performance Dashboard: Power BI

2020 - 2025

Enterprise reporting solution built at Maple Community Services consolidating operational and financial data across 5 systems.

- Designed star-schema data structures for efficient KPI aggregation, supporting reporting across ~250 support workers and ~350 NDIS participants with sub-second dashboard load times.
- Performed EDA and dataset validation in Python prior to modelling, catching data quality issues early and ensuring dashboard accuracy from day one.
- Implemented automated data refresh and validation pipelines, eliminating manual data pulls and ensuring dashboards reflected near real-time operational data.

EDUCATION

Bachelor of Engineering (Honours) – Software Engineering

2025

University of Technology Sydney (UTS)

Relevant coursework: Data Analytics, Database Fundamentals, Data Engineering

SKILLS & TECHNICAL PROFICIENCIES

Languages & Querying: SQL (CTEs, Window Functions, Joins, Subqueries, Aggregations, Data Validation), Python (pandas, scripting, automation)

Visualisation & BI: Power BI (DAX, data modelling, interactive dashboards, dynamic measures), Excel (Advanced: PivotTables, Power Query)

Data Engineering: ETL pipeline design, data normalisation, star-schema modelling, data cleaning and transformation, polling bias detection

Analytics Techniques: EDA, KPI development and metric definition, trend analysis, variance analysis, root cause analysis, performance monitoring

Systems & Platforms: SQL Server, Salesforce, Xero, Lumary, Skedulo, PRODA, Power Automate, Git, GitHub, Jira, Confluence
